SecondStack

Free program · charities and nonprofits

The AI agent platform, free for charities and nonprofits.

SecondStack gives your staff and volunteers AI agents for fundraising, grant reporting and everyday questions. The platform is free. We install it with you on your own server or cloud, train the person who looks after it and ask for one public case study in return.

Examples. The names are illustrative.

What you get.

Agents for every person, project and role
A personal agent for every person, a project agent for every workspace, and named agents for a role, such as a grants reporter.

ControlTower, the admin console
Owners, budgets and a record of every run. You set budgets per organization, team, person, API key and agent, each with an alert at a threshold you choose. That keeps the model spend inside the grant or the year's plan.

SecondGate, the AI gateway, with SecondGuard
Every AI call goes through the gateway. SecondGuard masks personal data by the rules you set before a request reaches a model.

What we do for you.

Install and configure it with you
You run SecondStack on your own server or cloud. We install and configure it with you and set up sign-in, your AI provider accounts and the first budgets. No technical person? Tell us when you apply, and we'll work out the set-up with you.

Train the person who looks after it
We train the person who looks after SecondStack and show them the admin console. Your staff and volunteers need no training to get started.

Answer your questions by email
After the install, we answer your questions by email: a budget to change, say, or a new named agent to set up.

- ✓ There is no license fee and no per-seat fee, so adding volunteers or staff does not raise the platform cost.

Donor and beneficiary data stays in your database.

Every chat, file and agent run is kept in your database, on your own server or cloud. Before a request goes to an AI provider, SecondGuard, the guardrails in the gateway, masks personal data by the rules you set.

Your side: what a fundraiser writes
Draft a thank-you note to **Priya Raman** for her gift to the winter appeal.

SecondGuard masks it before it leaves

What the AI provider sees
Draft a thank-you note to `[PERSON_1]` for her gift to the winter appeal.

Example. The real name comes back in the answer, on your side.

- ✓ Your data stays on your own server or cloud. Only the masked request reaches an AI provider.
- ✓ The record of every run shows which AI model it went to and what was masked before it left.

Two costs stay with you
You pay your own AI provider for what your team uses, and you pay for the server or cloud that SecondStack runs on. We do not host or resell models.

How it works.

Five steps, from your application to the case study.

1. **Apply**
   Tell us who you are and what you would like agents to do.
2. **We review**
   We review the application, ask for proof of status and reply by email.
3. **We install and configure**
   On your own server or cloud, with the person who will look after it.
4. **We train the person who looks after it**
   Your staff and volunteers need no training to get started. After the install, we answer your questions by email.
5. **We write the case study with you**
   Once you have used it for a while, we write it with you. You approve it before it is published.

Then Aster listens.
Your staff ask their agents in the web app, in Slack or in Telegram.

Your admins write to us by email.

Which charities and nonprofits qualify?

Registered charities and recognized nonprofits, for their own staff and volunteers. We review each application and reply by email.

Who can apply

- ✓ Registered charities
- ✓ Recognized nonprofits, such as US 501(c)(3)
- ✓ Registered foundations, community groups and NGOs

Not covered

- ✗ Companies that sell to charities, such as fundraising or CRM vendors
- ✗ The trading arm of a charity
- ✗ Individuals: SecondStack is made for a whole organization

When you apply, we ask for proof of status: your charity number, your 501(c)(3) determination in the US, or your country's equivalent.

What we ask in return.

One public case study, written with you, so other charities and nonprofits can see what SecondStack does for an organization like yours.

- ✓ We write it after an interview with your team.
- ✓ It names your organization and says what you use SecondStack for and what changed.
- ✓ You approve the text before it goes out. Nothing is published without your yes.
- ✓ It appears on secondstack.ai and on our LinkedIn, with a short video version if you agree.

Case study ✓ approved by you

How a charity put AI agents to work for fundraising and grants

Written by SecondStack after an interview with the team

Who you are	the organization, its people and the work
What the agents do	bids, funder reports, the questions staff ask
What changed	in your words, after a while of using it

Published on secondstack.ai our LinkedIn a short video, if you agree

Example of the article it will be.

Apply in a few lines.

Tell us who you are, what your charity does and what you would like agents to do. We reply by email.
